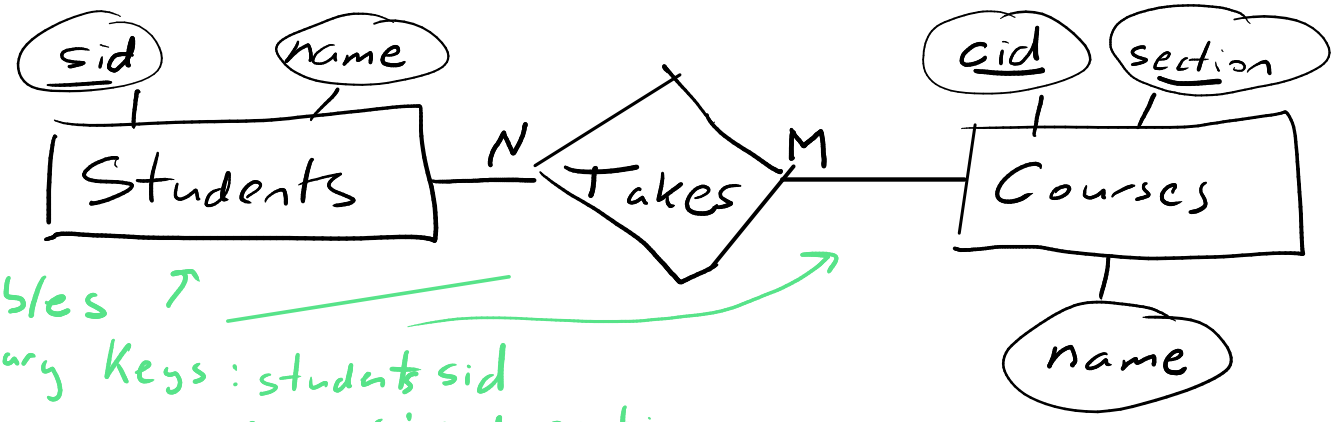
Come up with a relational DB implementation for each of the following. Specify tables, columns, primary keys, and foreign keys.

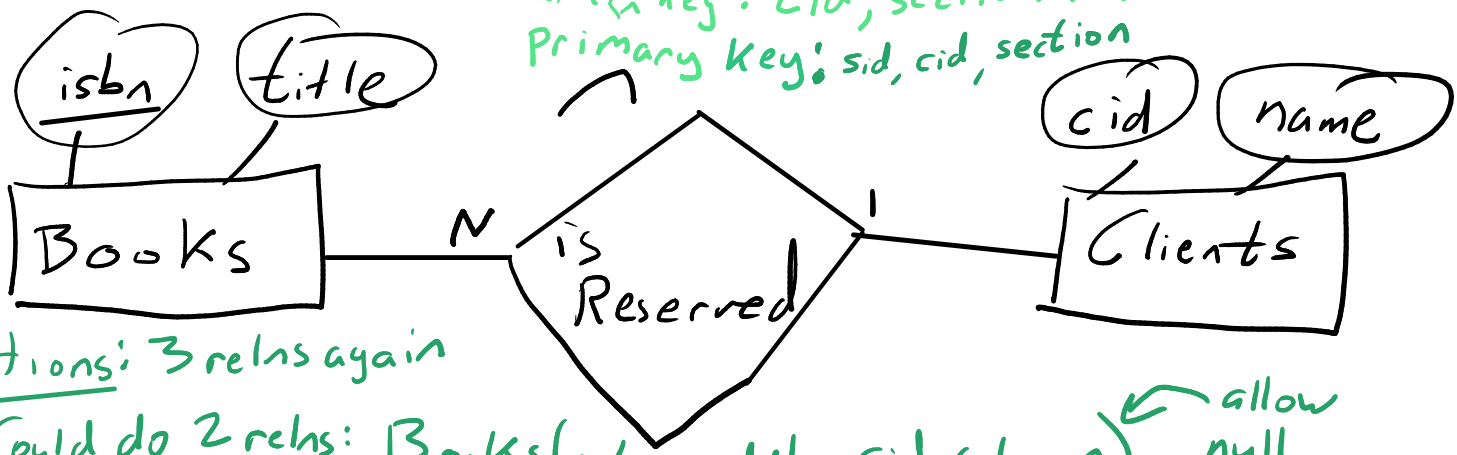
1



3 tables

Primary Keys: students sid
courses: sid, section
takes: foreign key: sid references students
foreign key: cid, section references courses
Primary key: sid, cid, section

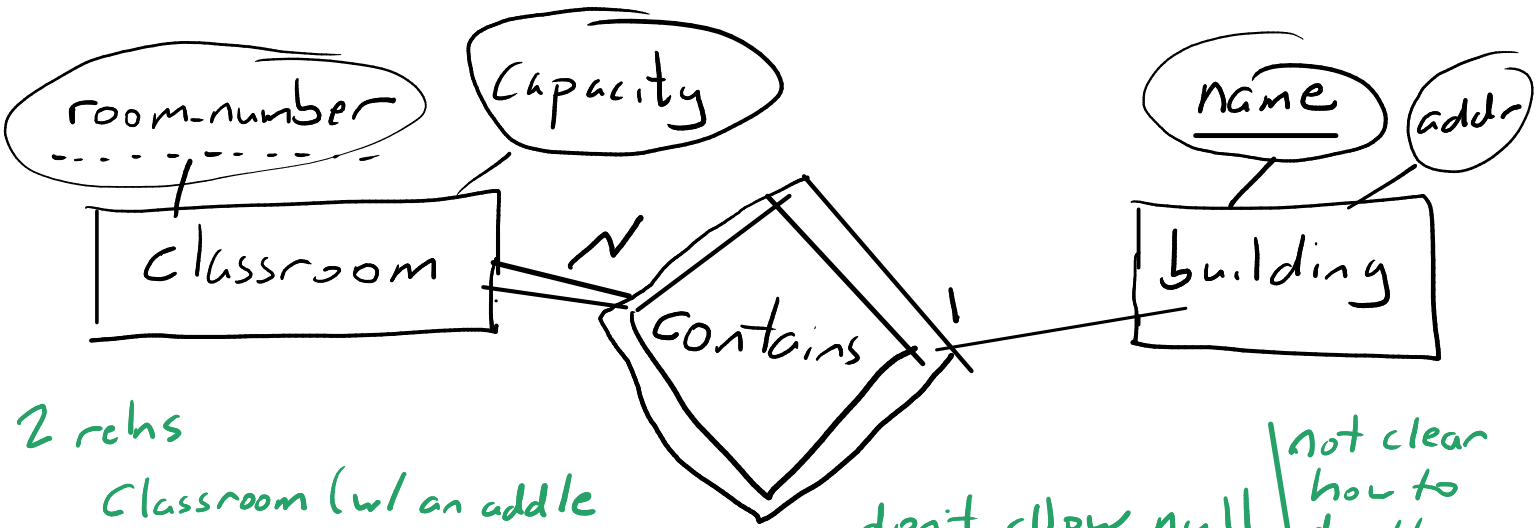
2



Options: 3 relns again

Could do 2 relns: Books (w/ an addl cid column) ← allow null
Clients

3



2 relns

Classroom (w/ an addle name column) ← don't allow null

building

not clear how to do this simply w/ 3 relns
