Dave Musicant

Database systems

Activity

- Sample membership database
- when we did this for real: Google sheet

Q: what problems could arise that just a basic Google sheet couldn't deal w/? What's wrong w/ this approach?

- Lots of duplication - multiple mailings
- No consistent formatting
  - messes up searches
  - messes up counts
  - messes up newsletter

  screws up counts, info changes have to happen in multiple places
- Ages of children are hardcoded
  updates are manual and error-prone

Families/individuals - no structure
- inconsistencies in data associated
Intending to be read by humans,
parens, etc are weird → but no color, or visual structure

TRUE/FALSE

Why did they do this?
EASY - familiar
